

Labour Costing (TimeCosting)

TimeCosting is software designed to collect, analyze and monitor labour distribution and job allocation information. TimeCosting enables both supervisory and senior management levels to monitor labour information. TimeCosting actively tracks both time and cost elements associated with each aspect of activity. All relevant database information is commonly shared by both systems. Time and Attendance pay-rules defined in TimeKeeper can be automatically applied to labour costs analysis.

TimeCosting also includes:

- Flexible Multi-Level Data Capture Configuration
- Flexible Multi-Level Rate Assignments
- Wage and Charge Separation
- Flexible Application of T&A Rules
- Integrated Attendance/Activities Full Screen Editing
- Automatic Wage Retention
- Automatic Default Job/Activity Allocations
- Flexible Data Import/Export Facilities
- Variance Reporting to Actual Attendance Total
